Практикум по истории английского языка:  
учеб. пособие. – СПб.: РГГМУ, 2019. – 180 с.

Рецензенты:

Родичева Анна Анатольевна, кандидат филологических наук, заведующая кафедрой английского языка и литературы, доцент.

Ткачева Ирина Александровна, кандидат педагогических наук, заведующая кафедрой педагогики, психологии и переводоведения СПбУТУиЭ, доцент.

Настоящее пособие предназначено для изучающих английский язык филологических и лингвистических факультетов. В пособии рассматриваются исторические события древнеанглийского и среднеанглийского периодов, повлиявшие на развитие и формирование английского языка. дается характеристика фонетической, грамматической и лексической системы древнеанглийского и среднеанглийского языка; рассматриваются особенности древнеанглийской прозы и поэзии, а также предлагаются отрывки из произведений для чтения на древнеанглийском языке. Пособие написано на английском языке.

## ВЕДЕНИЕ

Вопрос о том развитии языка является очень важным для понимания его современного состояния, которое является результатом длительного исторического развития. Изучение курса истории английского языка дает представление о фонетических, лексических и грамматических изменениях, которые имели место в процессе развития языка на протяжении нескольких веков. Данное пособие содержит дополнительный материал к лекционному курсу по дисциплине «История основного изучаемого языка (английский язык)», более подробно освещающая некоторые вопросы происхождения языка, особенностей литературного языка древнеанглийского периода развития. Особое внимание в данном пособии уделяется историческому развитию лексики английского языка, а также влиянием на нее других языков, таких как латинского и французского. В пособии также подробно рассматриваются литературные жанры прозы и поэзии с точки зрения особенностей языка древнеанглийского периода его истории.

Пособие состоит из введения, трех глав, глоссария и списка литературы. В первых двух главах изучаются исторические события, повлиявшие на развитие языка с V по XV век. В этих главах даны грамматические и фонетические характеристики языка соответствующего периода, особенности лексического состава. В третьей главе рассматриваются особенности наиболее значимых литературных произведений древнеанглийского периода, предлагаются отрывки из произведений данного периода для чтения. В каждой главе содержится список вопросов для обсуждения и закрепления материала. Предлагается также тематика для докладов и лингвистических исследований. В конце пособия дан тест для проверки усвоения материала.

В глоссарии дается список наиболее употребимых слов древнеанглийского языка для самостоятельного перевода текстов.

## **INTRODUCTION**

The question of the language development is very important for understanding its current state, which is the result of a long historical development. Learning about the history of English gives insight into the phonetic, lexical and

grammatical changes that have taken place in the process of language development over several centuries.

This manual contains additional material to the lecture course on the discipline "History of the main language studied (the English language)," consecrating in more detail some issues of the origin of the language, peculiarities of the literary language development during the Old English period. This manual focuses on the historical development of the English language vocabulary, as well as the influence on it of other languages, such as Latin and French. The manual also examines in detail the literary genres of prose and poetry in terms of the language features of the Old English historical period.

The manual consists of an introduction, three chapters, a glossary and the references. The first two chapters examine historical events that influenced the development of language from the 5th to 15th century. These chapters give grammatical and phonetic language characteristics of the relevant period, features of lexical composition. In the third chapter the peculiarities of the most significant literary works of the Old English period are considered, extracts from literary works of this period are offered for reading. Each chapter contains a list of questions

to discuss and anchor the material. Topics for reports and language studies are also proposed. At the end of the manual, an extensive test is given to check the adoption of the material.

The glossary provides a list of the most used words of ancient English for independent translation of texts.

# **CHAPTER I. OLD ENGLISH PERIOD OF THE LANGUAGE HISTORY**

## **1. Pre-history of the British Isles**

From the accounts of Roman historians, especially Tacitus, we know that Germanic tribes had spread over the northern Europe by the time of Christ. These were Celtic tribes organized on a small group basis. They invaded the British Isles in about VIII century BC and there were several waves of their invasion: the first wave was in 700s, when the tribes of Gaels came, the second was in 400s when the tribe of Brits came, and the third was in 200s BC, when the Belgs came. They built settlements and small towns including Londinium which appeared in about II-I century BC. However, in 55 BC Julius Ceaser came to the British Isles with his fleet to investigate this place. As his fleet was too small, he did not succeed in capturing the Isles and went there for the second time in 54 BC. And this time he also was not lucky to invade the Isles. Only in 43 AD the Emperor Claudius conquered the Isles and the Romans settled there organized the country with their own rules. They brought with them their culture, their language, their political and social system, even their ways of cultivating the soil. They

actually made good impacts into the life of the Celts. The Romans built the roads, towns, bridges, stone buildings and baths. They defended their country from the outside enemies: in the north these were the tribes of Scots and Picts, in the east they were the Scandinavian tribes, and in the south these were the continental Germanic tribes. However, they also made a negative impact, they forced the native Celtic tribes into the territory of Wales, Ireland and Scotland.

Until 410 AD most of Britain had been under Roman control, although the native inhabitants were the Celts, speaking various forms of Celtic language, which is the base of present-day Welsh, Irish, Gaelic and (in Brittany) Breton, as well as the now-dead languages Cornish and Manx. Some Celts could also speak Latin, the language of the Roman Empire.

After the Romans left the British Isles, the continental Germanic tribes began to invade Britain again. The eighth-century English historian Bede tells the story that these first settlers came from three Germanic tribes, the Angles, the Saxons and the Jutes. During that period there were no contemporary records and their history passed down from generation to generation. The language of Angles was called Englisc (English) by the native speakers.

## **2. Anglo-Saxon Britain**

The departure of the Romans left the country without the defence from the outside enemies and also a power vacuum, which caused the inside wars between the Celtic tribes. So the country was very weak and easy to capture.

The Anglo-Saxons came to the British Isles from the area of north-west Germany and Denmark, and perhaps also the north-east of the Netherlands, the area known today as Friesland. The Frisian language, still spoken by about 300,000 people in this part of the Netherlands, is the language to which English is most closely related historically. When the Germanic tribes came to Britain they settled along the east coast south of the Humber. Soon after they spread westwards and northwards, and by the seventh century Angelcynn (as they called themselves) became the dominant group within two centuries and settled in almost all of England and southern Scotland, the main exceptions were Cornwall and parts of north-west England. They established seven kingdoms: the Saxons established Wessex (West Saxons), Sussex (South Saxons) and Essex (East Saxons), the Angles established the kingdoms of Northumbria, Mercia and East Anglia (East Angles), and the Jutes established the kingdom of Kent which still exists. By the middle of the

seventh century the three largest kingdoms of Northumbria, Mercia, whose centre was Lichfield, and Wessex became powerful. The most powerful area by about 700 was Northumbria, where the most important centres were Durham and York. During the next century Mercia gradually became dominant.

In the Old English language, there were four main dialects: Northumbrian, Mercian, West Saxon and Kentish.

Old English was spoken and written by the Anglo-Saxon inhabitants in Britain from 450 AD until 1150. According to David Crystal, it continued to be used for some decades after the Norman Conquest of 1066. In Toronto University's Dictionary of Old English Corpus there are about 3,037 Old English texts dating from 600 to 1150 AD that contain a mere three million words. This total can be easily exceeded, for example, Charles Dickens' fiction amounts to over four million words. It is not a very big inheritance, comparing to a single modern author, but it is enough to make a description of the linguistic character of Old English. The development is most evident in vocabulary and grammar[David Crystal Language and voice].

The Anglo-Saxons defeated the Celtic tribes, which tried to fight off, and forced them to go westwards to the

place, which the Saxons called “Weallas”, or “Wales” (“the land of the foreigners”), some Celts were driven into the Cornwall, and the other part – to the north into the lowlands of Scotland. The Anglo-Saxons even fought between themselves to establish the power of their kingdom with a king as its head.

Anglo-Saxons brought with them from the continent their culture. The days of the week were named after Germanic gods: Tig (Tuesday), Wodin (Wednesday), Thor (Thursday, Frei (Friday). They created the names of their settlements by their family names, for example, the ending - *ing* meant “folk” or “family”, thus the name “Reading” is the place of the family of Rada.

The Saxons created such institution as the King’s Council called the Witan consisting of senior warriors and churchmen to whom kings turned for advice on difficult matters. Their class system consisted of a king, lords, soldiers, workers on the land and the men of learning, who came from the Church [McDowel, p.11-13].

### **3. The Scandinavian period**

The Vikings first made their presence in Britain in the 780s. In the ninth century the north and midlands fell under

Viking attack, and the southern kingdom of Wessex was the only area capable of resisting these attacks. This was during the reign of King Alfred (871–99), who established peace with the Danes having signed the Treaty of Wedmore with the Viking leader Guthrum (d. 890) in c. 878–90, according to which they could control the area known as the Danelaw [Hogg, p.7]. England was split into two parts. Alfred controlled the kingdom Wessex and London, and Guthrum took control over an area of eastern England. After the decisive battle in 878 AD Alfred captured London. Danelaw embraced the area in the east and north of England, while in the rest of the country Alfred was recognized as king. He built walled settlements called *bughsnow* usually spelt *borough*, which kept the Danes out and became prosperous markets and towns [McDowall, p. 15-16]. He also developed education and culture of his kingdom. He even translated himself the texts from Latin into Old English. For all this he was called Alfred the Great.

Over 2,000 Scandinavian place-names are still found here, chiefly in Yorkshire, Lincolnshire and the East Midlands. The evidence of Viking settlement remains in the language and comes from place-names, which they called with their own names. Over 600 of them can be identified

today by the use of the suffix *-by*, the Danish word for 'farm' or 'town' as in Rugby and Grimsby, and a common Norwegian suffix *-shire* 'a clearing'. For example, Rugby in Warwickshire, and *-shire* is virtually restricted to Cumbria (Westmorland and Cumberland) and North Yorkshire.

The variety of settlements had an enormous influence on the distribution of the texts, which survive from the Old English period. The majority of texts come from the southern part of England, from the upper Thames valley and around Winchester, the principal town of Wessex. Other settlements include such ecclesiastical centres as Canterbury, Lichfield, Worcester and Durham.

West Saxon texts originated from around the Winchester area and divided into two major groups: Early West Saxon and Late West Saxon. Early West Saxon texts were written about the time of Alfred or just after. In this group there are three fundamental texts: Pastoral Care, a translation of a major Christian treatise; the Anglo-Saxon Chronicles, or, the parts of the Chronicles associated with Alfred; and Orosius, a translation (and rewriting) of a text written by a late Roman historian. For Late West Saxon the most important texts are those of a monk Ælfric, who wrote at the end of the 10<sup>th</sup> century. Although Ælfric was trained at

Winchester, he probably came from further north in Wessex. He wrote a compilation of Lives of Saints and a great many homilies. Ælfric is particularly important because he obviously took great care in composition, style and language, so that the regularity of his language begins to approach the level of a standard language. There can be no doubt that this was an important factor in the widespread use of West Saxon in many parts of the country [Hogg , p.7].

#### **4. Old English as an Indo-European language**

Old English was the West Germanic language spoken between the 5th and 11th centuries. People called their language *Englisc*, themselves *Angle*, *Angelcynn* or *Angelfolc* and their land *Angelcynn* or *Englaland*. German is indeed a Germanic language, but Germanic is the term used to describe a group of languages which share a particular set of languages. Here is the list of the present-day languages which are of Germanic origin: English, Frisian, Dutch, German, Danish, Norwegian, Icelandic, Faroese, Swedish and Afrikaans (closely related to Dutch and outside Europe).

Germanic itself belongs to a much larger language family which is known as Indo-European. Some other groups of languages, including Indic, Greek, Romance, Slavic,

Baltic, Celtic and others, belong to the Indo-European group of languages. The other native languages of the British Isles, Welsh, Irish and Gaelic, are ultimately related to English.

Due to the comparative historical method, there were discovered relative languages on the bases of their vocabulary and pronunciation. There are words which share meanings over different languages and which have similar roots. If we compare Sanskrit (an ancient language of India), Greek, Latin and English, we find the following words for 'father':

<b>Sanskrit</b>	<b>Greek</b>	<b>Latin</b>	<b>English</b>
pita	pater	pater	father

In the first three languages the first consonant is always /p/ and the middle one /t/, and we can guess that the final /-r/ was lost in Sanskrit. English looks different, especially in terms of the first consonant. English /f/ often corresponds to Latin/p/. This process is called ***comparative reconstruction***.

It is also possible to use comparative reconstruction on more closely related languages, such as the Germanic group. Here are some examples of forms from English, Dutch and German, and French words:

<b>English</b>	<b>Dutch</b>	<b>German</b>	<b>French</b>
father	Vader	Vater	père
foot	voet	Fuss	piéd
tooth	tand	Zahn	dent
ten	tien	zehn	dix

It will be clear that English and Dutch share much in common, and that

German is not very different. All three are Germanic languages. French is a Romance language, deriving from Latin. Therefore it is much more distantly related. Where English has /f/ French has /p/ [Hogg, p.3].

### **5. Christianity and the influence of Latin on Old English**

Christianity became established across Britain during the Roman period. The Anglo-Saxons belonging to the Germanic pagan religion drove the Celts into the west and north where Christianity continued to spread.

By the time the Anglo-Saxons arrived in Britain in the 5<sup>th</sup> century, they had already had four centuries of linguistic interchange with Roman people on the European mainland. Latin words might have penetrated in English through some possible routes. They must have entered the Celtic speech of

the Britons during the Roman occupation (43– 410 AD), and some might have remained in daily use after the Romans finally left in the early 5th century. Rich Britons may also have used Latin as a medium of upper-class communication. So, there might have been a significant number of Latin words in daily use, some of which would have been assimilated into English. Some Latin words would also have been brought in by the Anglo-Saxons invaders [Crystal. Language and voice].

In 597, following the arrival of St Augustine sent by Pope Gregory to re-establish Christianity in England, the king of Kent accepted Christianity, and Augustine became the first Archbishop of Canterbury in 601. Augustin was interested in establishing Christian authority and faith among the noble people, when the Celtic Church, which had settled in Ireland, brought Christianity to the ordinary people of Britain [McDowall, p.13-14].

The influence of the monks grew fast, and a lot of Latinisms might have dropped into the everyday speech.Ælfric's Colloquy, aimed to learning Latin, shows the importance of Latin in the monastic culture of the period [Crystal. Language and voice].

The Latin words express a considerable semantic range. They include words for plants and animals (e.g. pea, cat), food and drink (e.g. butter, wine), household objects (e.g. cup, candle), money (e.g. 'mint'), metals (e.g. copper), items of clothing (e.g. belt, sock), settlements, houses and building materials (e.g. street, wall, tile), as well as several notions to do with military, legal, medical and commercial matters (e.g. tribute, seal, pound). Most are nouns, such as 'camp', 'street' and 'monk', with verbs and adjectives.

Many important works of earlier Latin literature were copied in Anglo-Saxon England, like "Prudentius's *Psychomachia*". In the Anglo-Saxon period, writers also composed new works in Latin, like Wulfstan of Winchester's *Narratio metrica de Sancto Swithuno* [Crystal, *Language and voice*].

Borrowing Latin words was not the only way in which the missionaries engaged with this task. Rather more important, in fact, were other linguistic techniques. One method was to take a Germanic word and adapt its meaning so that it expressed the sense of a Latin word: an example is 'gast', originally 'demon' or 'evil spirit', which came to mean 'soul' or 'Holy Ghost'. Another technique, relying on a type of word creation which permeates Old English poetry,

was to create new compound words – in this case, by translating the elements of a Latin word into Germanic equivalents. So, ‘liber evangelii’ became ‘godspellboc’ (‘gospel book’), and ‘trinitas’ became ‘þriness’ (i.e. ‘threeness’ = ‘trinity’) [Crystal, Language and voice].

## **6. The Old English alphabet**

Scientists discovered Old English in written texts dating to the early 8th century. The earliest appearances of the Old English language are found in inscriptions written using the Runic alphabet known as Anglo-Saxon or Anglo-Frisian runes, or futhorc/fuþorc (from the pronunciation of its first six letters). The Old English alphabet looked like Anglo-Frisian runes, but contained only 30 runes not 34.

Some experts think that the futhorc was brought to the British Isles by immigrants from Frisia (the northern Netherlands). Another theory is that they came here from Scandinavia, then were taken to Frisia in the other direction.

According to George Julian, the first runic inscriptions started showing up in Britain around the 5th century A.D. The oldest known piece of written English is the Undley Bracteate, a gold medallion with a runic

inscription that reads “this she-wolf is a reward to my kinsman”.

Anglo-Saxon runes were used probably from the 5th century AD until about the 10th century. They started to be replaced by the Latin alphabet from the 7th century, and after the 9th century the runes were used mainly in manuscripts until the Norman Conquest.

Runic inscriptions are mostly found on jewellery, weapons, stones and other objects, found in eastern and southern England, and only a few inscriptions have survived.

Once Old English started to be used more commonly for writing, the Latin alphabet was adopted. The grapheme *Æ/æ* (called ‘ash’), earlier used by scribes to represent the Latin diphthong /ae/, came to stand as a full letter on its own. Two runes – *Þ/þ* (called ‘thorn’) and *ƿ/p* (called ‘wynn’) – from Futhorc were retained to represent sounds with no corresponding letters in the Latin alphabet. The letter *Ð/ð* (called ‘eth’), developed first in Irish writing, was also employed, being generally interchangeable with *Þ/þ*.

“ð” ‘eth’ is a modification of the Latin letter d. “þ” and “ð” are pronounced like the modern “th”, so ‘þæt’ means “that”, ‘þe’ means “the”.

Aa	Ææ	Bb	Cc	Dd	Ðð	Ee	Ff	Ʒz	hh	Ii	Ll
a	ash	be	c	de	eth	e	eff	yogh	há	i	ell
a	æ	b	c	d	ð	e	f	Ʒ (g)	h	i	l
Mm	Nn	Oo	Pp	Rr	Ss	Tt	Uu	Vv	Xx	Yy	þþ
emm	enn	o	pe	err	ess	te	u	wynn	eks	yr	thorn
m	n	o	p	r	s	t	u	p (w)	x	y	þ

The alternate forms of g and w (yogh and wynn/wen respectively) were based on the letters used at the time of writing Old English. Today they can be substituted for g and w in modern writing of Old English.

‘Yogh’ Ʒ originated from an insular form of g and wynn/wen came from a runic letter and was used to represent the non-Latin sound /w/. The letters g and w were introduced later by French scribes. ‘Yogh’ came to represent /ç/ or /x/ [25].

Although the Anglo-Saxons used basically the same alphabet as modern speakers, the Old English orthography is rather different from that in present-day English (PDE). The Anglo-Saxons did not use the following letters: *j*, *v*, *w* and the

letters *k, q, x, z* were very rare. They had several letters which we use very rarely either or not at all: *æ, t, e*. There is a list of Old English and PDE correspondences:

<b>Old English</b>	<b>PDE</b>
æ	a
c	c, k, ch
f	f, v
g	g, y
s	s, z
t	th
y	i

In the Old English, there were several digraphs, combinations of two letters, which represent a single sound. Here is the table with the Old English digraphs and their present-day English (PDE) correspondences:

Old English	PDE
cg	gg dg(e), gg
sc	sh, sk
hw	wh
hr	hl, hn r, l, n

Among vowels we regularly distinguish between long and short vowels, so long vowels often have distinctive spellings, such as /ou, oo, oa, ee, ea/. In Old English there were no distinctions between long and short vowels in writing. Editors often distinguish between them by placing a dash or macron over long vowels, so that we find /rīse/ ‘I rise’ but /risen/ ‘risen’ [Hogg, p.5-6].

## 7. The sound system of Old English

The study of the sound system of the Old English language is based on the concept of the phoneme as an important feature of the language system.

Old English sound system or phonology is rather speculative and theoretical as Old English is preserved only in the written form. Nevertheless, there is a very large corpus of Old English texts, so it is not difficult to draw certain conclusions about the Old English pronunciation.

Old English had a distinction between short and long or doubled consonants, and a distinction between short and long vowels in stressed syllables. It had also short and long diphthongs that no longer exist in Modern English.

Thus there were three voiceless stops: /p, t, k/ but only two voiced ones: /b, d/. The fricative system there were only voiceless phonemes: /f, θ, x/. The voiced sounds were in what is called complementary distribution with the voiceless ones. That means, when a fricative phoneme occurred at the beginning or end of a word, it was produced as voiceless, but in the intervowel position in a word it was produced as voiced, as in the example, the word full ‘full’ was phonetically [full], and the word dri<sup>̄</sup>fan ‘drive’ was pronounced as [drivan] [Hogg, p. 8].

There were two sibilant phonemes, /s/ and /ʃ/, but only the former had a voiced allophone medially. Otherwise they behave in a fashion parallel to the fricatives. In addition to these sibilants, OE also had two affricates, namely /tʃ/, as in ‘church’, and /dʒ/, as in ‘edge’ [Hogg, p. 8].

Unlike the situation in PDE, there were only two nasal phonemes in OE, namely /m/ and /n/. The difference arises because in OE when the phonetic sound [ŋ] occurs, it is always followed by either [k], as in ‘thank’, or [g], as in

‘sing’. Therefore it remains an allophone of /n/. In standard PDE, on the other hand, final [g] has been lost, so that /ŋ/ is phonemic [Hogg, p.9].

Word-stress is relatively simple in Old English, generally, the first syllable of a word is stressed. However, prefixes in verbs are never stressed, but rather on the root of a verb. As an example, the Old English noun ANswaru with the first syllable stressed for “[an] answer” and “to answer”: and the verb answarian, stressed anSWARian, this is because ‘an-’ is actually a prefix. Modern English still occasionally follows similar patterns – compare for example the noun “a PREsent” which has the stress on the first syllable, versus the verb “to preSENT” which has the stress on the first syllable after the prefix.

In compound words – that is, two separate words which are compounded together to form a new word – the main stress falls on the first syllable of the compound word, and a secondary stress falls on the first syllable of the second word. So, in the word ‘indēofolwītga’ the primary stress is on the syllable ‘dēo’ and a secondary stress falls on ‘wīt’ [29].

Syllabification and Syllable-Length is very important for the Old English language, both for its grammar and its poetry. When a single consonant is followed by a vowel, it

belongs to the following syllable; otherwise it belongs to the preceding syllable. So the word *scipu* has two syllables (*scipu*) because the *p* is followed by a vowel. When two consonants are flanked on each side by a vowel, the first consonant belongs to the preceding syllable while the second consonant belongs to the following syllable, for example, the word ‘*ende*’ breaks down into two syllables as *en-de*, but ‘*weall*’ is one syllable.

Long syllables are those, which end with a consonant forming a ‘closed syllable’, or they may include a long vowel or a long diphthong – *ā, æ, ē, ī, ō, ū, ŷ, ēa, ēo, īe*. For example, the verb ‘*rīsan*’ has two long syllables ‘*rī-san*’; ‘*rī*’ has a long vowel and ‘*san*’ is closed. Short syllables are those which end with no consonant, they are so-called ‘open syllables’, and they may contain a short vowel or a short diphthong – *a, æ, e, i, o, u, y, ea, eo, ie*. The word ‘*lacu*’, has two short syllables: ‘*la-cu*’; both syllables are open and contain short vowels.

In a disyllable word containing two short syllables, those two syllables may be taken together to count as a single long syllable. A word ‘*spere*’ (‘*spear*’), with the two short syllables ‘*spe-re*’, can be employed as a single long syllable for the poetic purpose. In a disyllable word whose first

syllable is long, the second syllable is counted as being short. For example, the word ‘wāpen’ (‘weapon’) has two long syllables, but if required it could be counted as long syllable + short syllable [29].

### **8. Rules of Reading in Old English**

In general, the sound meaning of the majority of Old English (OE) letters, correspond to the sound meanings of corresponding Latin letters.

E.g. OE ‘etan’ [etan], OE ‘faran’ [faran], OE ‘oxa’ [oksa] etc.

However, there are some exceptions and following rules should be observed for letters indicating more than one sound [Hugg, p.12].

1. The letter æ renders the sound [æ]. In OE manuscripts we often come across the vowel combination /æ/, instead of /æ/. /*ǣ*/ renders the corresponding long vowel.
2. The ligature /oe/ stands for the sound [oe], like the French sound /eu/, and German ö.
3. The sound meaning of the letter y, corresponds to the French u, or German ü. E.g. OE *fyllan* (to fill), *ȳ* renders a long vowel, e.g OE *fȳr* (fire).
4. The letter c stands for two sounds:
  - 1) hard, velar [k];

2) soft, palatal [kʰ], which gradually became the affricate [tʃ];  
e.g. OE macian [makian] (to make);

OE ceosan [kʰeoʒan] (to choose) [Hugg, p.12].

In a consonant combination sc, c always renders the sound [k];

e.g. OE fisc [fisk] (fish).

5. The letter n stands for [n] in all positions except when followed by [k] or [g]; in this case it indicates the sound [ŋ];

e.g. OE sinʒan [siŋgan] (to sing).

6. The letter ʒ represented four different sounds:

1) an initial ʒ before consonants and back vowels and medial Z after n, represented the voiced stop [g];

e.g. OE ʒōd [gōd] (good),

OE ʒōs [gōs] (goose),

OE sinʒan [siŋgan] (to sing)

2) an initial ʒ before front vowels represented the voiced palatal spirant [j];

e.g. OE ʒeard [jæard] (yard), OE ʒeonʒ [jeoŋʒ] (young).

3) After back vowels and after the consonant r, the letter ʒ represented the voiced guttural spirant [ɣ] (this sound corresponds to the Georgian sound Ⴣ);

e.g. OE beorʒ [beorɣ] (mountain, ბეორღ);

OE *dazas* [daʒas] (days *ժայտակ*) [Hugg, p.13].

4) The letter *ȝ* also represented soft, palatal [gʷ], which gradually developed into a soft affricate [dʒ].

Double *g* was represented by the letters *cȝ*, e.g. OE *secȝan* [seggan] (to say).

7. The letters *f*, *s* and *þ*, *ð* stood for voiced fricatives between vowels and also between a vowel and a voiced consonant; otherwise they indicate corresponding voiceless fricatives;

e.g. OE *fyllan* [fylan] (to fill),

but OE *ofer* [over] (over);

OE *rīsan* [rīzan] (to rise),

but OE *rās* [rās] (rose);

OE *þæt* [θæt] (that),

but OE *oþer* [oðer] (other)[Hugg, p.13].

8. The vowel combination *ea* renders a diphthong [æa] in OE; e.g. OE *bearn* [bæarn] (a child).

9. The vowel combination *eo* represents the diphthong [eo] in OE.

10. The vowel combinations *io* and *ie* rendered the diphthongs [io, ie]. However, from the X century this diphthongs developed into monophthongs [i, y] [Hugg, p.13].

## **9. Loan words**

In Old English there was a very limited use of borrowed or loan words taken from other languages, they were primarily from Latin, from the Scandinavian languages after the Viking invasions, from the Celtic languages and from the other Germanic languages. At the very end of the period loan words appeared from Norman French.

### **9.1. Latin loans**

Speaking about Latin loans they were in three groups: 1) continental period; 2) settlement period; 3) Christian period. The first group consists of words borrowed into different Germanic dialects, including the predecessors of Old English, when the Germanic tribes settled on the continent and interacted with the Romans during the expanding and dominating Roman Empire. These loan words come from diverse areas of vocabulary. They were mostly nouns. These borrowings showed the widespread influence of the Empire. Here are some examples: ‘candel’ (‘candle’), ‘catte’(‘cat’), ‘elpend’(‘elephant’), ‘planta’(‘plant’), ‘strǣt’(‘road’) and, a verbal example, ‘cýpan’(‘buy’). These examples come not from classical Latin, but from Vulgar

Latin, which is the form of the language used by the soldiers of the Roman army and camp-followers.

It is estimated that Old English contained about 170 Latin loans which are continental borrowing. During the first two or three centuries following the Anglo-Saxon settlement in Britain even fewer Latin loans were borrowed. After the withdrawal of the Romans in 410 the number of new Latin loans was minimal as Latin lost its position as the official language. But Latin remained in use namely by the Celtic aristocracy at least for a time. A few words are the best known from this time, for example, 'ceaster' ('castle'), because of its frequent use in place-names.

The loans from the period of Christianity can be divided into two groups. The first group belongs to the first two or three centuries after the adoption of Christianity in the seventh century. The Latin loans borrowed in this period are mostly of a political nature, so they are associated with the organization of the church, rather than with the concepts of the new faith. Thus we find words such as 'abbod' ('abbot'), 'mæsse' ('mass'), 'offrian' ('offer') [Hogg, p.109-111].

There are some words related to learning, for example, 'sco<sup>l</sup>' ('school'), a few words of a more general

nature, 'caul'('cabbage'). On the other hand 'hǣlend' 'Saviour', an entirely nativeword, was used for Christ, rather than Latin 'dominus'.

The second group of post-settlement Latin loans are associated with the period of the Benedictine monastic revival which occurred in the second half of the tenth century. These loans are different in character from any of the earlier loans, often reflecting a different register of the language, most suited to formal and highly educated language, rather than the language of everyday speech. These new loans come not from Vulgar Latin, as previously, but rather from the writers of Classical Latin. These new loans are not always well assimilated into the language, so that they retain most or all of their Latin structure. Furthermore, it is sometimes the case that a new word in fact replicates an earlier loan of the same original word, but showing a Classical, rather than a Vulgar, Latin form and without most of the changes which occurred in the transition to Old English. A quite typical example of this process is 'tabele' ('table') alongside earlier 'tæfl' [Hogg, p.109-111].

Although many of these new loans are religious in nature, for example 'apostata' ('apostate') and 'sabbat' ('Sabbath'), others reflect the general world of learning. This

latter accounts for words such as ‘cucumer’ (‘cucumber’) and ‘delfin’ (‘dolphin’). The formal nature of the new vocabulary can be seen in examples where the Latin word replaces an Old English one, as in ‘grammatic’/‘cræft’(‘grammar’) for native ‘stæfcræft’ [Hogg, p.109-111].

There were also borrowings from Latin of particular type, they are semantic loans. The basic shape of such a loan is where the meaning of a Latin word is transferred to an English word, which did not originally have that meaning. For example, the word ‘tunge’ (‘tongue’) had at first only the meaning of the body part, but under the influence of Latin ‘lingua’, which has not only that meaning but also the meaning ‘language’, it also acquired the meaning ‘language’. A slightly different type is found in Latin ‘discipulus’ ‘disciple’, for in that case what happened was that the Latin meaning was transferred to English ‘cniht’(‘boy, servant’). In late Old English we also find what are called loan translations, where a new complex expression is created in imitation of a Latin complex expression. Thus we find, for example, Latin ‘praepositio’ (‘proposition’) turned into English ‘forsetnys’ [Hogg, p.109-111].

There are only a few hundred Latin loan words in Old English, and a great many of these, perhaps a third, are

restricted to formal registers, which includes not only technical writing but also Latin–Old English glossaries. Nevertheless, these loans provide the bulk of loan words in Old English.

## **9.2. Loans from other languages**

The other substantial group of loans is from Scandinavian languages. It is well-known, that eventually English acquired a great many important words, including even function words such as ‘are’, from the Scandinavian languages. But it is also well-known that the overwhelming majority of these words only begin to be found after the end of the Old English period. There is the fact that two closely-related languages are involved. On the one hand there is Danish, whose speakers occupied the north-east, Yorkshire and down to East Anglia; on the other there is Norwegian, found in the north-west [Hogg, p.112].

Perhaps the first substantial evidence of Scandinavian influence is to be found with place-names, although we mostly have to rely here on the evidence of the Domesday Book, composed after the Norman Conquest. Thus we find Danish suffixes such as -by ‘village’ or -þorp ‘farm’ and Norwegian -þweit ‘clearing’ which eventually appear in

place-names such as Derby, Scunthorpe and Satterthwaite. The place-name evidence is important, as proof of the degree of contact between the English and the Scandinavians, but it does not necessarily prove the assimilation of large numbers of loan words into the ordinary language. Many of the early Scandinavian loans are, naturally, associated with seafaring, so we find 'hæfene' ('haven'), 'lending' ('a landing'), 'steōresman' ('pilot'). Others are legal terms, as a result of the Danelaw settlement, including the word 'lagu' 'law' itself, and connected with that is 'feolagu' ('fellow'). Many of these words are to become common, for example 'hu̅sbonda' ('householder'), but others have either been lost or become restricted in use, e.g. 'carl' ('man'). There are a few verbs which have been borrowed, for example 'eggian' ('egg on'), 'hittan' ('hit').

During the period of settlement Danish became the language of power for a generation, but the number of Scandinavian words that entered Old English is about 150. Between Old and Middle English a considerable number of Scandinavian words was established in the Old English language. The earliest Middle English literature, from around 1200, shows thousands of Old Norse words, especially in texts coming from the northern and eastern parts of the

country, such as “the Ormulum” and “Havelock the Dane”. Many of these words were well established, because they began to replace some common Anglo-Saxon words. The word for 'take', for example, was ‘niman’ in Old English; Old Norse taka is first recorded in an English form ‘toc’ (‘took’) during the late 11th century, but by the end of the Middle English period ‘take’ was mostly used in English [Crystal, Language and voice].

Old Norse made a permanent impact on the grammar of the Old English language. The most important of these changes was the introduction of a new set of third-person plural pronouns ‘they’, ‘them’ and ‘their’. These replaced the earlier Old English inflected forms: ‘hi’ or ‘hie’ (‘they/them’), ‘hira’ or ‘heora’ (‘their, of them’) and ‘him’ or ‘heom’ (‘to them, for them’). Pronouns do not change very often in the history of a language, and to see one set of forms replaced by another is truly noteworthy. Another grammatical influence was the use of ‘are’ as the third-person plural of the verb ‘to be’. This form had already been used sporadically in northern texts during the late Old English period – for example, in the “Lindisfarne Gospels”, in Middle English it steadily moves south, eventually replacing the competing plural forms ‘sindon’ and ‘be’ [Crystal, Language and voice].

Among other Scandinavian grammatical features are the pronouns ‘both’ and ‘same’, and the prepositions ‘til’ (‘till’ or ‘to’) and ‘fro’ (‘from’). The negative response word, ‘nay’, is also Norse in origin (nei). And the -s ending for the third person singular present-tense form of the verb (as in she runs) was almost certainly a Scandinavian feature. In Old English this ending was usually -ð, as in ‘hebbað’ (‘raises’) and ‘gæð’ (‘goes’); but in late Northumbrian texts we find an -s ending, and this too spread south to become the standard form [Crystal Language and voice].

It is surprising that very few words have been borrowed from Celtic. It is true that many place-names, of rivers, for example, retain their Celtic name; in the case of Avon that name is widespread throughout Britain. There is a sociolinguistic explanation for this, namely that the Celtic peoples formed a subordinate group within the new Anglo-Saxon society, and hence their language was shunned [Hogg, p.112].

Settlement words borrowed from Celtic include ‘dunn’(‘dun’) and ‘broc’(‘badger’). Irish missionaries were extremely influential in the spread of Christianity, and even if they regularly spoke Latin, they introduced a few words from their native language, of which the most frequent is

‘drȳ’(‘magician’). Present-day cross is almost certainly a borrowing, possibly very late in the period, since in Old English it did not replace the native ‘rōd’(‘rood’). Almost all French loans into English either occur after the Conquest or during the preceding reign of Edward the Confessor. For the most part, therefore, they belong more obviously to the Middle English period. This is clearly true of words such as ‘cancelere’(‘chancellor’), ‘castel’(‘castle’) and ‘prisun’(‘prison’), which are all very late in terms of Old English. ‘Pryt’(‘pride’) is a French loan which is often noted for its rather early use in Wulfstan’s ‘Sermo Lupi ad Anglos’ [Hogg, p.113].

From the other Germanic languages we know of a handful of words which appear to have been borrowed from Old Saxon. These include ‘stri’ (‘struggle’) and ‘sūht’(‘illness’). We know about these words because they appear in a poem called Genesis B, which is a translation from Old Saxon. But whether these are genuine loans, the result of close dialectal contact, or accidentally missing from other texts is hard to decide. The compound ‘ī̄ g.land’ ‘island’ may be a singular borrowing from Frisian [Hogg, p.113].

## **10. The transition from Old English to Middle English**

The transition from Old English to Middle English is defined by the linguistic changes taking place in grammar, when Old English began to lose most of its inflectional endings, and word order became the primary means of expression the links between the words. Word order was by no means random in Old English, nor was it totally fixed in Middle English. New words come into English on a daily basis, but new habits of grammatical construction do not. These changes in grammatical constructions happened chiefly during the 11th and 12th centuries [Crystal, Language and voice].

Religious material from this period is of great sociolinguistic significance, revealing the continuity between the two languages. If the work of Ælfric (c. 950–1010) had not been in demand at that time, the huge labour involved in copying would never have been undertaken. Ælfric of Eynsham (c. 950–c. 1010) wrote the collection of texts known as the Lives of the Saints between 990 and 1002. And his writings were still being copied as late as 1200 (British Library, Cotton MS Julius E VII, f. 1v) [Crystal, Language and voice].

## **The most important events of the Old English**

### **Pre-history**

800 BC The Celts inhabited much of Europe, and began to colonize the British Isles

55 BC First Roman raids on Britain under Julius Caesar

54 BC when Julius Caesar invaded

43 AD Roman occupation of Britain under Emperor Claudius (beginning of Roman rule of Britain)

60 AD Boudicca's Rebellion

410 End of the Roman Rule in Britain. Roman withdrawal from Britain

### **Old-English period 450-1066**

430-450 Germanic tribes of Angles, Frisians, Saxons and Jutes started to raid the British Isles

450 Anglo-Saxon settlement of Britain began

450-480 The earliest Old English inscriptions appeared. Seven Anglo-Saxon kingdoms were established

597 St. Augustine arrived in Britain. Beginning of Christian conversion of the Anglo-Saxons.

600 Anglo-Saxon language covers most of modern-day England

660 Bede The Venerable wrote “The Ecclesiastical History of the English People” in Latin

800 Old English epic poem “Beowulf” composed

865 Viking raids of Britain began. The Danes occupied Northumbria. Alfred the Great became the king of Wessex, “The Anglo-Saxon Chronicle” was begun. Danelaw was established. Charles II of France granted Normandy to the Viking chief Hrolf the Ganger. It was the beginning of Norman French.

871-899 The Rule of King Alfred the Great

927 the Kingdom of England was founded with the dominance of a Wessex kingdom.

1000 The oldest surviving manuscript of “Beowulf” dates from this period

1014-1035 The Rule of King Canute, the Danish King of Britain

1042-1066 The reign of Edward the Confessor

1066 Earl Harold became the king of Britain

## Questions for discussion

1. What was another name of the Old English language?
2. What language family does the English language belong to?
3. What group of languages does the English language belong to?
4. Which of the Celtic tribes gave their name to their new country?
5. Which Roman expeditions were successful in subjugating Britain?
6. What was the impact of the Roman invasion?
7. Who had inhabited the British Isles before the Anglo-Saxons?
8. Where and when did Anglo-Saxons come from?
9. What kingdoms did they create?
10. What were the Old-English dialects?
11. How did Anglo-Saxons call their land, their language and themselves?
12. Who invaded Britain during the Old English period?
13. What was the historical role of the Vikings? Did they influence the Anglo-Saxon language?
14. Why was the King Alfred called the Great?

15. What kingdom became the dominant during the reign of Alfred the Great? Why?
16. What time did the first writings in Old English appear?
17. What historical event did the Old English period finish with?
18. When did the Christianity begin to spread in Britain?
19. What was the most important historical event of the Old English period? Why?

### **Topics for reports**

1. Anglo-Saxon society of the Old-English period.
2. Alfred the Great is the prominent figure of the Old English period.
3. The influence of the Christianisation on the Old English language.
4. Vocabulary of the Old English language.
5. The phonetical, grammatical and lexical peculiarities of the Old English language.

## **CHAPTER II. MIDDLE ENGLISH PERIOD OF THE LANGUAGE HISTORY**

### **1. Remarkable events of the period**

Middle English period is defined as starting in 1066 with the Norman Conquest, when William the Conqueror, Duke of Normandy, invaded Britain from northern France and settled in London with his nobles and court. After he became the King William I of England, he crushed the Anglo-Saxon opposition and deprived them of their property.

Normans themselves were descendants from Vikings who had settled in northern France about 200 years before and adopted a rural dialect of French, so that not a single Norse word survived in their language. But it had considerable Germanic influence, and was called Anglo-Norman or Norman French, which was different from the standard French of Paris. The differences between these dialects became even more considerable after the Norman Conquest, especially at the beginning of the 13<sup>th</sup> century, and England became more isolated from continental Europe.

Anglo-Norman French became the language of the kings and nobility of England for more than 300 years. During these centuries in which English had no official status and no regulation, and it became the third language in its own country. It was largely a spoken language, and the main dialects of it were Northern, Midlands, Southern and Kentish. These dialects developed from the Northumbrian, Mercian, West Saxon and Kentish dialects of Old English. The proliferation and the development of regional dialects during this time were so extreme that people in one part of England could not even understand people from another part. By the end of the 12<sup>th</sup> century London had become the largest city in the country since the beginning of the 12th century when became the Norman capital. Consequently, the commercial and political influence of London and the East Midlands ensured that these dialects started to prevail, and the other regional dialects and varieties began to lack social prestige indicating a lack of education. The 14th century London dialect is quite recognizable as a form of English nowadays, whereas the texts in the Kentish dialect of the same period look like a foreign language for us.

Henry IV running the country from 1399 to 1413 was the first monarch who had English as his mother tongue.

Latin was mostly used for official records and as a language of Church. The peasantry and lower classes who were the majority of the population (about 95%) continued to speak English, so that two languages developed separately. Later the Old English and Anglo-Norman languages began to mingle, and this mixture is referred to as Middle English [27].

The most famous universities of and were founded in Oxford in 1167 and in Cambridge in 1209, which influenced a quick spread of general literacy, although books were still copied by hand.

One of the most remarkable events of this period was beginning of printing in England. Printing was introduced in Mainz, Germany in the 1450s by Johann Gutenberg, who invented the printing press. Printing spread rapidly throughout Europe in the second half of the 15th century. William Caxton, who was born in Kent, between 1415 and 1424, worked as an English merchant, particularly in Bruges. Caxton could see the potential of print and learnt how to print in Cologne. In 1472, Caxton started printing various books, the first of which was his own translation of the Refuel of the Histories of Troy, an account of the Trojan legend. Another of his own English translations was the Game of Chess.

Caxton brings printing to England in around 1476 and set up the first printing shop near Westminster Cathedral. He issued over a hundred books between 1476 and 1492. Most of these books were written in English, and a few were in Latin. One of the first major books he printed, in 1477, was “The Canterbury Tales” written by Geoffrey Chaucer, one of the most widely known of medieval English poets. The second edition of “The Canterbury Tales” was issued in 1483, as well as other poems by Chaucer: He also printed Chaucer’s prose translation of Boethius’s “Consolation of Philosophy”. In 1483, he also printed works of other major medieval English poets, whose works were popular in manuscript, including John Gower’s “Confessio Amantis” and John Lydgate’s “Life of Our Lady” and many other books including prose, such as popular historical writings “Brut”, “The Polychronicon”, published in 1482.

Many of the books he published contained his own prefaces or epilogues, explaining the contents and reasons that led him to publish them. His own prose made important contributions to the English language, including the introduction of a large number of new words into the lexicon, such as ‘concussion’, ‘fortification’, ‘servitude’ and ‘voyager’. In general, he provides the first usage of over

1,300 words. Caxton also introduced a number of technical changes to the production of his books, for example, he used different type fonts, and he also was the first English printer to commission woodcuts to illustrate his books. The works he printed were very significant for the development of literacy in late medieval England. English writings became more widely available than ever before.

## **2. Middle English vocabulary.**

### **French and Latin influence**

The vocabulary of Middle English was influenced immensely the French language in such areas as law, trade, architecture, estate management, music and literature. Vocabulary was especially affected in ecclesiastical architecture, as French architects in England adapted their Continental designs sources for cathedrals. The terminology in this field was very extensive, covering from building tools to aesthetic abstractions.

Literary works in Middle English also experienced the impact of French. According to the Oxford English Dictionary, by the end of the Middle English period there was around 30 per cent of English vocabulary of French origin. During Middle English there was a huge increase in the use

of affixes (prefixes and suffixes), producing affixed words, with French introducing such (Latin-derived) prefixes as *con-*, *de-*, *dis-*, *en-*, *ex-*, *pre-*, *pro-* and *trans-*, and such suffixes as *-able*, *-ance/-ence*, *-ant/-ent*, *-ity*, *-ment* and *-tion* (now there are over 100 prefixes and suffixes in everyday English). The suffixes *-ment*, *-ant*, *-ity*, *-ance* were especially productive, in words such as ‘tournament’, ‘defendant’, ‘solemnity’ and ‘avoidance’. The suffix *-tion* produced hundreds of new words, such as ‘creation’, ‘contemplation’ and ‘suggestion’, etc.

Many of the nouns with abstract meaning related to the crown and nobility (e.g. crown, castle, prince, count, duke, viscount, baron, noble, sovereign, heraldry); to government and administration (e.g. parliament, government, governor, city); to court and law (e.g. court, judge, justice, accuse, arrest, sentence, appeal, condemn, plaintiff, bailiff, jury, felony, verdict, traitor, contract, damage, prison); to war (e.g. army, armour, archer, battle, soldier, guard, courage, peace, enemy, destroy); to authority (e.g. authority, obedience, servant, peasant, vassal, serf, labourer, charity); to fashion (e.g. mansion, money, gown, boot, beauty, mirror, jewel, appetite, banquet, herb, spice, sauce, roast, biscuit); and of art and literature (e.g. art, colour, language, literature,

poet, chapter, question). However, some Anglo-Saxon words, such as ‘cyning’ (‘king’), ‘cwene’ (‘queen’), ‘erl’ (‘earl’), ‘cniht’ (‘knight’), ‘ladi’ (‘lady’) and ‘lord’ survived.

There were also Anglo-Saxon names for humble trades (e.g. shoemaker, baker, miller, etc.); the French names were used for skilled trades (e.g. merchant, tailor, mason, painter, etc.). While the farm and wild animals had their Anglo-Saxon names, but their meat was called with their French names, as it was cooked and served to the French nobility (e.g. ‘sheep’ – ‘mutton’, ‘cow’ – ‘beef’, ‘calf’ – ‘veal’, ‘swine’ – ‘pork’, ‘deer’ – ‘venison’, etc.). Sometimes a French word completely replaced an Old English word (e.g. ‘crime’ replaced ‘fren’, ‘place’ – ‘stow’, ‘people’ – ‘leod’, ‘beautiful’ – ‘wlitig’, ‘uncle’ – ‘eam’, etc.). Some words combined French and Old English components, such as the French ‘gentle’ and the Germanic ‘man’ combined to form ‘gentleman’. There are some words, both English and French, that obtained different senses (e.g. the OE ‘doom’ and French ‘judgement’, ‘hearty’ and ‘cordial’, ‘house’ and ‘mansion’, etc.).

There are many words with roughly the same meaning, as French-based synonyms entered the English language (e.g. the French ‘maternity’ – OE ‘motherhood’,

'infant'–'child', 'amity'–'friendship', 'battle'–'fight', 'liberty'–'freedom', 'labour'–'work', 'desire'–'wish', 'commence'–'start', and many others). Some of these words acquired the differences in meaning, so today, there are phrases combining Anglo-Saxon and Norman French doublets (e.g. 'law and order', 'lord and master', 'love and cherish', etc.) [27].

The flow of French loanwords into English reduced during the 15th century, but the borrowings did not stop coming into the language because of the growing influence of Latin. As the language of religion, learning and science, Latin words had a more impact than French. Today, in the modern dictionaries, there are over 30,000 words that have French origin, but for Latin, there are over 50,000.

### **3. The language changes in the Middle English period**

Taking into account borrowings from other languages, the lexical change took place during Middle English. At the end of the Old English period there were about 50,000 words, many of which fell out of use later, but by the end of the Middle English period the total number of words had doubled. Half of them was of non-Germanic origin, but thanks to the nature of English grammar, the fundamental

Anglo-Saxon character of the language was maintained. In vocabulary, about half of the most commonly used words were from Old English [Crystal, Language and voice].

The period was offering people a much greater linguistic choice. In 1200, people could only ‘ask’; by 1500 they could ‘question’ (from French) and ‘interrogate’ (from Latin) as well. During Middle English there was the evolution of a language which contained regional, social and stylistic variation. On the one hand, there was a literary style, characterised by a lexicon of French and Latin origin, and employed by the aristocratic and well-educated people. On the other hand, there was a popular style, typically informal and colloquial, containing words with Germanic roots, and used by ordinary folk [Crystal, Language and voice].

#### **4. Grammatical change in Middle English**

Middle English texts are closer to Modern English in their grammar and vocabulary. The difference between Old and Middle English is mostly seen in grammar. Old English was a language with full word endings; Modern English has reduced endings. In Old English word endings expressed meaning relationships between words, that is why the word order was changeable, or free. During the Middle English

period most of the earlier inflections disappeared, and there appeared some alternative means of expression, using word order and prepositional constructions rather than word endings.

Among the new kinds of construction were the progressive forms of the verb and the range of auxiliary verbs (I have seen, I didn't go, etc.). The infinitive form of a verb was marked by a particle 'to' ('to read'). A new form of expressing relationships such as possession appeared, using 'of' (for example, 'the pages of a book'). Several new pronouns appeared through the influence of Old Norse.

The pronunciation system underwent significant changes. Several consonants and vowels altered their values, and new contrastive units of sound ('phonemes') emerged. In particular, the distinction between the /f/ and /v/ consonants began to differentiate words (e.g. 'grief' – 'grieve'), between /s/ and /z/ (e.g. 'seal' – 'zeal'). The 'ng' sound at the end of a word also became contrastive (in Old English the g had always been sounded), as 'sin' – 'sing'. And at the very end of the period, all the long vowels underwent a series of changes. The way sounds were spelled altered, as French scribes introduced their own spelling conventions, such as 'ou' for /u/ ('house'), 'gh' for /h/ (night) and 'ch' ('church')

[D. Crystal, Language and voice]. For example, the “Domesday Book”, in which William the Conqueror took stock of his new kingdom, was written in Latin to emphasize its legal authority.

By the 14th century, noun genders had almost completely died out, and adjectives, which had 11 different inflections in Old English, were reduced to two (singular and plural) and to one as in modern English. The stress, which was usually on the lexical root of a word in Old English, shifted towards the beginning of words, which encouraged the loss of suffixes, and many vowels developed into the common English unstressed “schwa”. As inflections disappeared, word order became more important and, by the time of Chaucer, the modern English subject-verb-object word order had gradually become the norm. The use of prepositions became more extensive instead of verb inflections [27].

There were some changes in orthography.

1. The Old English letters ð (‘edh’ or ‘eth’) and þ (‘thorn’) were gradually replaced with ‘th’, and the letter ȝ (‘yogh’) was replaced with ‘g’ (or often with ‘gh’, as in ‘ghost’ or ‘night’).

2. 'þe' was replaced with 'the' to be the definite article.

3. Most nouns had lost their inflected case endings by the middle of the Middle English period.

4. The Anglo-Saxon 'cw' was substituted with the Norman 'qu', so that 'cwene' became 'queen', 'cwic' became 'quick'.

5. Old English 'sc' defining the sound /sh/ was regularized as 'sh' or 'sch', e.g. 'scip' became 'ship'.

6. The initial letters 'hw' became 'wh' in Middle English, as in 'when', 'where'.

7. The letter 'c' was replaced with 'k' in some words, e.g. 'cyning'/'cyng' became 'king') or with 'ck', e.g. 'boc' became 'bock' and later 'book', or with 'ch', e.g. 'cild' became 'child', 'cese' became 'cheese'.

8. The letter "h" was deleted at the beginning of words like 'hring' ('ring') and 'hnecca' ('neck'), but it was added to the beginning of many Latin loanwords, e.g. 'honour', 'heir', 'honest', 'habit', 'herb', it was sometimes pronounced and sometimes not.

9. The letters 'f' and 'v' began to be differentiated, as in 'feel' and 'veal', so did 's' and 'z', as in 'seal' and 'zeal', and also 'ng' and 'n', as in 'thing' and 'thin'.

10. As the letter 'u' was similar to 'v', 'n' and 'm' in writings, it was replaced in many words with 'o', e.g. 'son', 'come', 'love', 'one'.

11. The digraph 'ou' was of French origin and was introduced in spelling of words like 'house' and 'mouse'.

12. Long vowel sounds were marked by a double letter, e.g. 'boc' became 'booc', 'se' became 'see'.

13. The long vowel 'a' became 'o' in Middle English, e.g. 'ham' became 'home', 'stan' became 'stone', 'ban' became 'bone'.

14. The short vowels were identified by consonant doubling, e.g. 'siting' became 'sitting'.

15. The plural noun ending 'en' (e.g. 'house/housen', 'shoe/shoen') had largely disappeared by the end of the Middle English period. Nowadays it remains today in some examples, such as 'children', 'brethren' and 'oxen'. It was mostly replaced by the French plural ending '-s' [27].

In Old English there was no distinction between the formal and informal second person singular, the pronoun 'thou', the words 'ye' or 'you' were the second person plural. In the 13th Century these pronouns were introduced as the formal singular version with 'thou' remaining as the informal form [27].

## **The most important events of the Middle English period**

### **Middle-English period 1066-1500**

1066 The Norman Conquest under William the Conqueror, the Duke of Normandy.

1086 “Domesday Book” was compiled.

1100 London became the capital of England.

1150 The oldest surviving manuscripts in Middle English dated from this period. Eleanor of Aquitaine, French wife of Henry II, became the Queen Consort of England. “The Anglo-Saxon Chronicle” was finished. Oxford University was established.

1167 The foundation of Oxford University by English scholars expelled from Paris.

1180 King John loses the province of Normandy to France. Cambridge University established.

1215 The barons forced King John the Lackland to sign the Magna Carta, the Great Charter.

1265 Simon de Montfort summoned the first parliament.

1295 Edward I summoned the Model Parliament.

1337 The beginning of the Hundred Years’ War with France.

1348-50 The Black Death kills one third of the British population. The Statute of Pleading replaces French with English as the language of law (although records continue to be kept in Latin). English was used in English Parliament for the first time.

1370 William Langland writes “Piers Plowman”. John Wycliffe publishes his English translation of “The Bible”.

English replaces Latin as main language in schools (except Universities of Oxford and Cambridge).

1388 Henry IV became first English-speaking monarch since the Conquest. Chaucer began writing “The Canterbury Tales”.

1450 The Great Vowel Shift began. William Caxton establishes the first English printing press.

1453 The end of Hundred Years’ War with France.

1455-1485 The War of Roses

1474 William Caxton printed his first book in England.

1485 The battle of Bosworth Field when the Lancastrians fought the Yorkists. Henry VII, the Lancastrian, married the woman from the Yorkist family.

1500 The beginning of English Renaissance.  
William Tyndale printed his English translation of the New Testament of “The Bible”.

### **Questions for discussion**

1. What language was the vocabulary of Middle English influenced?
2. What was the official language in Britain during the Middle English period?
3. What were the Middle English dialects? What Old English dialects did they develop from?
4. What was the main dialect in Middle English?
5. What language influenced the Middle English the most? In what spheres of life?
6. How was the major change in pronunciation of Middle English vowels called?
7. What was the meaning of feudalism?
8. Why was the Domesday Book written?
9. What were the consequences of the Norman Conquest?
10. Who initiated the parliament? When?
11. When was Magna Carta signed?
12. Who brought printing to Britain? When?
13. What impacts did the beginning of printing have?

14. What historical events of the period influenced the development of the language?

15. What event marked the end of the Middle English period?

### **Topics for reports**

1. Cultural achievements of the Middle English period.
2. General outline of the main political and social events of the period.
3. The main phonetic and grammatical changes in the Middle English language.
4. The meaning of printing for the development of the language.
5. The prominent historical figures of the period.
6. Changes in the vocabulary of Middle English.
7. The struggle between French and English during the period.
8. The royal dynasties that ruled Britain during the period and their impact into the development of the country.
9. Cultural traditions that were born during the period.

### CHAPTER III. OLD ENGLISH LITERATURE

Northumbrian was the dialect in which most of the Old English literature was originally written. Although, nearly all of that literature was lost in its Northumbrian form for various reasons, King Alfred the Great much of the surviving Northumbrian literature rewrote into his own West Saxon dialect. Since the time of Alfred nearly all Old English texts have been written in the West Saxon dialect [29].

The Ruthwell Cross is one of the most impressive writing monuments of the Anglo-Saxon period dating to the 8th century. This stone cross over five metres high was found in the village of Ruthwell in south-west Scotland, it is carved with inscriptions and scenes from the life of Christ in Latin and also in Old English runic alphabet. It is one of the best examples of the artistic tradition flourished in Britain and Ireland in the 5-7<sup>th</sup> centuries. Scholars think that it was probably used as a preaching cross. The cross an earliest version of “The Dream of the Rood”, one of the oldest surviving Old English poems, which tells the story of the crucifixion of Christ. During the time of the Reformation the Ruthwell Cross was pulled down and partially buried. It was only reconstructed in the 19th century [8].

## 1. PROSE

The earliest texts were a mixture of charters, interlinear glosses, that is Latin manuscripts with Old English forms written above the original Latin, and Latin-Old English glossaries. The writings of Alfred and his contemporaries can be called continuous lengthy prose, which often seems clumsy to us. This prose had its own features, they are, 1) the structure of sentences consists of an additive style, 2) clause added to clause without much further subordinate or rhetorical structure.

At that time there was no inherited tradition of prose in Old English, and the only models were Latin prose and native poetry [Hogg, p.117]. Some of the prose works haven't survived.

The earliest English prose work, the law code of King Aethelberht I of Kent, was written within a few years of the arrival in England (597) of St. Augustine of Canterbury. Other 7th- and 8th-century prose is practical in character, including laws, wills, and charters. The earliest literary prose dates from the late 9th century, when King Alfred translated into English "certain books that are necessary for all men to know." Alfred himself translated the Pastoral Care of St. Gregory I the Great, the Consolation of Philosophy of

Boethius, the Soliloquies of St. Augustine of Hippo, and the first 50 Psalms. His Pastoral Care is a literal translation, but his Boethius is a restructured work. Alfred's prefaces to these works are of great historical interest.

Alfred probably urged Bishop Werferth of Worcester to translate the Dialogues of Gregory; and also inspired some scholarly people to translate Bede's "Historia ecclesiastica" and Paulus Orosius's "Historiarum adversum paganos libri vii" ("Seven Books of History Against the Pagans"). Both of these works are much abridged; the Bede translation follows its source slavishly, but the translator of Orosius added many details of northern European geography and also accounts of the voyages of Ohthere the Norwegian and Wulfstan the Dane. These accounts, in addition to their geographical interest, show that friendly commerce between England and Scandinavia was possible even during the Danish wars.

The Anglo-Saxon Chronicle originated during King Alfred the Great's reign, who ruled in Wessex from 871 to 899. It contains the records telling about the history of Anglo-Saxons and the British Islands. The Anglo-Saxon Chronicle exists in several versions kept in various monasteries and brought up to date. The most important is the Winchester Manuscript. The text was owned by Matthew Parker,

Archbishop of Canterbury (1559–75), and that is why is often referred to as “The Parker Chronicle”. It is the only Chronicle manuscript in which the language has not been brought into conformity with the late West Saxon literary standard. All manuscripts of the Chronicle are abbreviated as B, C, D, E, F, and H but only E and F are important for the Arthurian period.

Manuscript E (kept in Oxford, Bodleian Library MS Laud 636) is known as the Peterborough Manuscript. The Chronicle was continued until 1154. This manuscript once belonged to William Laud, Archbishop of Canterbury 1633–45 and is sometimes called the “Laud Chronicle”. Each Old English entry is followed by a translation into Latin [30].

These annals form the first instalment of the famous Anglo-Saxon Chronicle, which was continued in various monasteries, till the last version, the Peterborough Book, ends with the joyful accession of Henry II.

Thus King Alfred may be regarded as the first known writer of English literary prose. Abbot Ælfric, about a century after, recognized his debt to the King, saying that in his day ‘there were no other godly books in the English tongue save the books that King Alfred skillfully translated from Latin into English.’ “Ælfric formed himself consciously on the

style of the King, and in his hands English prose became smoother and clearer, more elegant, and more suited to the expression of shades of thought” [7].

Its earliest records convey the accounts beginning from the reign of Julius Caesar. The early 755 record describes in detail a feud between the West Saxon king Cynewulf and the usurper Cyneheard. The entries covering the Danish wars of the late 9th century, and those running from the reign of Ethelred II to the Norman Conquest in 1066) contain many passages of excellent writing [25].

**10th- and 11th-century prose.** The early 10th century does not contain good literary works, except some homilies. The prose literature of the mid and late 10th century is associated with the Benedictine Reform, when Aethelwold, bishop of Winchester, translated the Rule of St. Benedict. But the greatest and most prolific writers of this period were Aelfric and Wulfstan. Aelfric, a monk at Cerne and later abbot of Eynsham, whose works include three cycles of 40 homilies each (Catholic Homilies, 2 vol., and the Lives of the Saints), as well as homilies not in these cycles; a Latin grammar; a treatise on time and natural history; pastoral letters; and several translations. Aelfric’s writings were lucid and beautiful in language with the rhetorical devices of Latin

literature. He influenced writers living long after his times with alliterative prose, which imitates the rhythms of Old English poetry.

Wulfstan, archbishop of York, wrote legal codes and a number of homilies, including “Sermo Lupi ad Anglos” (“Wulf’s Address to the English”), a ferocious critic of the morals of his time. Also numerous anonymous works were produced in this period, including homilies, saints’ lives, dialogues, and translations of such works as the Gospels, Old Testament, liturgical texts, monastic rules, and other clerical texts. By the end of the 10<sup>th</sup> century, English had been established as a literary language with a versatility in prose and poetry [25].

***(Anglo-Saxon Chronicle. The Parker Manuscript)***

Ælfric and Wulfstan were near contemporaries and, equally, significant players in the Benedictine Monastic Revival which was prominent throughout the second half of the tenth century. Hogg implies that these writers were different from each other. Indeed, Ælfric was above all a teacher, a private man, whilst Wulfstan was as much a statesman as a monk. The type of language they use is that of Latin rhetoric both authors are fully acquainted with, for example, Wulfstan depended greatly on Ciceronian models. But both writers are able to exploit the native structures and vocabulary to permit variation and to adjust the Ciceronian style to their works. This is that both writers exploit the

structural features identified with Old English poetry, so this stylistic usage was first invented by Ælfric. The essential features are the use of alliteration and the use of two-stress phrases. It appears with two pairs of stress in each line and alliterative syllables in italics [Hogg, p.117-118].

*Then Martin travelled to a distant land  
and when he came to the mountains he met some robbers  
and one of them immediately raised up his axe  
in order to slay him. But another forewarned him  
so that he caught the handle and restrained the blow.*

[Hogg, p.117-118].

## 2. POETRY

Old English poetry was of two types: the Germanic pre-Christian and the Christian poetry. It has survived in four manuscripts. The first manuscript is called the "*Junius manuscript*", also known as the "*Caedmon manuscript*", an illustrated poetic anthology. The second manuscript is called the *Exeter Book*, also an anthology, located in the Exeter Cathedral since it was donated there in the 11th century. The third manuscript is called the *Vercelli Book*, a mix of poetry and prose; found in Vercelli, Italy. The fourth manuscript is called the *Nowell Codex*, also a mixture of poetry and prose.

There are about 30.000 lines of Old English poetry in four manuscripts, dating from 975 to 1050. There are a number of manuscripts or Books that contain certain poems. In "Vercelli Book" there are such poems as "Andreas", "The Fates of the Apostles", "Address of the Soul to the Body", "The Dream of the Rood", "Elene". In "Exeter Book" there are "The Wanderer", "The Seafarer", "Widsith", "Deor", "The Wife's Lament", "The Riddles". In "Junius Manuscript" – "Genesis", "Exodus", "Daniel", "Christ and Satan". In "Cotton Manuscript" – "Beowulf", "Judith".

Old English poetry had no known rules or system left to us by the Anglo-Saxons, all we know is due to the modern theories. The first widely accepted well known theory was by Eduard Sievers (1885) in which he distinguished five alliterative patterns. The theory of John C. Pope (1942) uses musical notations which has had some acceptance. Sievers' alliterative verse is based upon accent, alliteration, the quantity of vowels, and patterns of syllabic accentuation. It

consists of five permutations on a base verse scheme; any one of the five types can be used in any verse. The system was inherited and exists in the older Germanic languages. Two poetic figures commonly found in Old English poetry are the *St. Caedmon*

Kenning, an often formulaic phrase that describes one thing in terms of another, e.g. in *Beowulf*, the sea is called the 'swan's road', and

litotes, a dramatic understatement employed by the author for ironic effect.

Poetry was an oral craft, a poet could accompany his telling verses by a harp. It was handed down orally from generation to generation. Anglo-Saxon culture had a rich tradition of oral story telling, not much of which was written down. There is a small amount of the surviving Old English text, and most Old English poets are anonymous, but only three of those are known today by their works: Caedmon, Aldhelm and Cynewulf.

Caedmon is the most well known and considered to be the father of Old English poetry. He lived at the abbey of Whitby in Northumbria in the 7th century. Only a single nine line poem remains, called Hymn, which is also the oldest surviving text in English [30].

## *Hymn*

Nu sculon herigean      heofonrices weard,  
meotodes meahte      and his modgeþanc,  
weorc wuldorfæder,      swa he wundra  
gehwæs, ece drihten,      or onstealde.  
He ærest sceop      eorðan bearnum  
heofon to hrofe,      halig scyppend;  
þa middangeard      moncynnes weard,  
ece drihten,      æfter teode  
firum foldan,      frea ælmihtig.

*Now let us praise the Guardian of the Kingdom of Heaven the might of the Creator and the thought of his mind, the work of the glorious Father, how He, the eternal Lord established the beginning of every wonder. For the sons of men, He, the Holy Creator first made heaven as a roof, then the Keeper of mankind, the eternal Lord God Almighty afterwards made the middle world the earth, for men.*

## **Cædmon's Hymn in different dialects**

Hē ārist scōp / ælda barnum  
heben til hrōfe / hāleg Scepen.  
Thā middungeard / moncynnæs Uard,  
ēci Dryctin, / æfter tīadæ  
fīrum foldu, / Frēa allmectig.

Aldhelm, bishop of Sherborne (d. 709), is known to have performed secular songs accompanied by a harp. Much of his Latin prose has survived, but none of his Old English poetry has remained.

Cynewulf is believed to live in the 9th century to which a number of poems are attributed including “The Fates of the Apostles” and “Elene” (in the Vercelli Book), and “Christ II” and “Juliana” (in the Exeter Book) [15].

As Christianity began to appear, retellers often recast the tales of Christianity into the older heroic stories.

## **2.1. Old English heroic poetry**

Old English heroic poetry glorifies not only ancient and contemporary warriors, but also the acts of self-sacrifice of brave women. It combines pagan and Christian values. There are the key texts of the genre, including “Beowulf”, “The Battle of Maldon”, “The Dream of the Rood” and “Judith”.

The literature of the Anglo-Saxons (c. 450–1100) is abundant in heroic, or epic, poetry: narrative poems which recount the deeds of heroic figures who overcome significant challenges of life.

The Old English poetry tells about the Germanic heroic past. The longest of this (3,182 lines), and most important, is “Beowulf”, which appears in the damaged Nowell Codex. It tells the story of the legendary Geatish hero Beowulf who is the title character. The story is set in Scandinavia, in Sweden and Denmark, and the tale likewise probably is of Scandinavian origin. The story sets the tone for much of Old English poetry, and it has achieved national epic status, and is of great interest not only to historians, anthropologists, literary critics, but also writers, film directors and amateurs of poetry.

Two other heroic poems have survived in fragments, “The Fight at Finns burh”, a retelling of one of the battle scenes in Beowulf (although this relation to Beowulf is much debated), and “Waldere”, a version about the life of Walter of Aquitaine. Two other poems mention heroic figures: “Widsith” dating back to events in the 4th century contains a catalogue of names and places associated with valiant deeds. The second poem “Deor” is a lyric, in the style of Consolation of Philosophy, having examples of famous heroes.

The Anglo-Saxon Chronicle contains various heroic poems inserted throughout. The earliest from 937 is called

The Battle of Brunanburh, which celebrates the victory of King Athelstan over the Scots and Norse. There are five shorter poems: capture of the Five Boroughs (942); coronation of King Edgar (973); death of King Edgar (975); death of Prince Alfred (1036); death of King Edward the Confessor (1065).

The most famous Old English battle poem “Battle of Maldon” is the 325 line poem tells about the ealdorman of Essex, Earl Byrhtnoth and his men, who fell in battle against the Vikings in 991. Byrhtnoth, the leader Anglo-Saxon troops, fought with the Viking army, and this resulted in the heroic death of Byrhtnoth, and a valiant defeat for the English, as almost all of Byrhtnoth’s men faced death by his side. The elderly warrior Byrhtwold faces his death by saying such words.

*Text*

*The Battle of Maldon (312-319)*

*In the West Saxon dialect*

Hige sceal þē heardra, / heorte þē cēnre,  
mōd sceal þē mære, / þē ūre mægen lýtlað.  
Hēr lið ūre ealdor / eall forhēapen,  
gōd on grēote; / ā mæg gnornian

se ðe nū fram þis pīgplegan / pendan þenceð.

Ic eom frōd fēores; / fram ic ne pille,  
ac ic mē be healfe / mīnum hlāforde,  
be spā lēofan men / licgan þence.

***Modern English translation***

*Thought shall be the harder, the heart the keener,  
courage the greater, as our strength lessens.*

*Here lies our leader all cut down, the valiant man in  
the dust;*

*always may he mourn who now things to turn away  
from this warplay.*

*I am old, I will not go away, but I plan to lie down by  
the side of my lord, by the man so dearly loved.*

***(Abstract of the poem “Battle of Maldon”)***

It is considered to be the one of the finest poems, but the beginning and the end of the poem are missing and the only manuscript was destroyed in a fire in 1731.

## **Beowulf**

Beowulf is the longest epic poem in Old English of more than 3,000 lines long. Beowulf is set in the pagan world of 6th-century Scandinavia, but the scientists do not know for certain when the poem was first composed. Beowulf is a classic tale of the triumph of good over evil, telling the story of an eponymous hero, and his successive battles with a monster named Grendel, with its revengeful mother and with a dragon guarding a hoard of treasure.

Beowulf is divided into three acts. The first part of the poem describes the events taking place in Heorot, the kingdom of Denmark, which Grendel is terrorising. The Geatish prince Beowulf hears of his neighbours' plight, and to help them he sails there with his warriors. Beowulf meets Grendel in unarmed fight, and kills the monster by ripping off its arm.

The Danes enjoyed the victory, but Grendel's loathsome mother attacks in revenge the king's hall. Beowulf descends into her underwater lair, and slays the hag in the cruel struggle. There is much rejoicing among the Danes, and Beowulf is rewarded with many gifts for his victory. He becomes the ruler of the kingdom of the Geats. 50 years later, when Beowulf is old aged. A rampaging dragon, which is

guarding a treasure-hoard, attacks the realm. Beowulf kills his foe in the fight being fatally wounded.

The poem must have been conveyed orally over many generations, and probably modified by each bard, until the existing copy was made.

The use of poetic compound words, or ‘kennings’, is a key feature of “Beowulf”.

*Text*

## **Beowulf**

song in searwum, þa hie to sele furðum  
in hyra gryregeatwum gangan cwomon.  
Setton særepe side scyldas,  
rondas regnhearde, wið þæs recedes weal,  
bugon þa to bence. Byrnan hringdon,  
guðsearo gumena; garas stodon,  
sæmanna searo, samod ætgædere,  
æscholt ufan græg; wæs se irenþreat  
wæpnum gewurþad. þa ðær wlonc hæleð  
oretmeccgas æfter æpelum frægn:  
Hwanon ferigeað ge fætte scyldas,  
græge syrcan ond grimhelmas,  
heresceafta heap? Ic eom Hroðgares

ar ond ombiht. Ne seah ic elþeodige  
þus manige men modiglicran.  
Wen ic þæt ge for wlenco, nalles for wræcsiðum,  
ac for higeþrymmum Hroðgar sohton.  
Him þa ellenrof andswarode,  
wlanc Wedera leod, word æfter spræc,  
heard under helme: We synt Higelaces  
beodgeneatas; Beowulf is min nama.  
Wille ic asecgan sunu Healfdenes,  
mærum þeodne, min ærende,  
aldre þinum, gif he us geunnan wile  
þæt we hine swa godne gretan moton.  
Wulfgar mapelode þæt wæs Wendla leod;  
wæs his modsefa manegum gecyðed,  
wig ond wisdom: Ic þæs wine Deniga,  
freat Scildinga, frinan wille,  
beaga bryttan, swa þu bena eart,  
þeoden mærne, ymb þinne sið,  
ond þe þa ondsware ædre gecyðan  
ðe me se goda agifan þenceð.  
Hwearf þa hrædlice þær Hroðgar sæt  
eald ond anhar mid his eorla gedriht;  
eode ellenrof, þæt he for eaxlum gestod

Deniga frean; cuþe he duguðe þeaw.  
Wulfgar maðelode to his winedrihtne:  
Her syndon geferede, feorran cumene  
ofer geofenes begang Geata leode;  
þone yldestan oretmecgas  
Beowulf nemnað. Hy benan synt  
þæt hie, þeoden min, wið þe moton  
wordum wrixlan. No ðu him wearne geteoh  
ðinra gegncwida, glædman Hroðgar.  
Hy on wiggetawum wyrðe þinceað  
eorla geæhtlan; huru se aldor deah,  
se þæm heaðorincum hider wisade.  
Hroðgar maþelode, helm Scyldinga:  
Ic hine cuðe cnihtwesende.  
Wæs his ealdfæder Ecgþeo haten,  
ðæm to ham forgeaf Hreþel Geata  
angan dohtor; is his eafora nu  
heard her cumen, sohte holdne wine.  
ðonne sægdon þæt sæliþende,  
þa ðe gifsceattas Geata fyredon  
þyder to þance, þæt he XXXtiges  
manna mægen-cræft on his mundgripe  
heaþorof hæbbe. Hine halig god

for arstafum us onsende,  
to Westdenum, þæs ic wen hæbbe,  
wið Grendles gryre. Ic þæm godan sceal  
for his modþræce madmas beodan.  
Beo ðu on ofeste, hat in gan  
seon sibbedriht samod ætgædere;  
gesaga him eac wordum þæt hie sint wilcuman  
Deniga leodum. [19]

### **Modern versions of Beowulf**

“Beowulf” has been translated into numerous modern languages, such as English, Dutch, French, German, Greek, Hungarian, Italian, Japanese, Russian and Telugu (a Dravidian language spoken in India). The most famous modern translation is that by Seamus Heaney, Nobel Laureate in literature, which won the Whitbread Book of the Year Award in 1999. A children’s version by Michael Morpurgo, illustrated by Michael Foreman, was published in 2006.

Being composed in the Anglo-Saxon era, Beowulf impresses modern writers and film directors to create films, plays, operas, graphic novels and computer games. One of the most distinguished films is “The 13th Warrior” (1999), the

Icelandic-Canadian movie “Beowulf & Grendel” (2005); and “Beowulf” (2007), starring Ray Winstone, Anthony Hopkins and Angelina Jolie[The British Library].

A lot of modern scholars and scientists, linguists and philologists have been studying “Beowulf”. Victoria Symons, an Honorary Lecturer at University College London, where she teaches Old and Middle English literature, puzzles out the meaning of monsters in Beowulf.

“Beowulf” is one of the most important pieces of medieval literature surviving before the Norman Conquest period, and it is one the longest Old English poem. But it’s also very much a mystery. There is only one surviving copy of the medieval period, the manuscript known as British Library Cotton MS Vitellius A XV [Victoria Symons <https://www.bl.uk/medieval-literature/articles/monsters-and-heroes-in-beowulf>].

Most critics agree, that the monsters hold a ‘central importance ... crucial to the very structure of the poem’. The three monster fights make up most of the action of the poem, and Beowulf is a heroic man who kills three monsters and then dies [24].

Grendel is a horrifying monster whose eyes glow with a ‘leoht unfæger’ (‘grim light’), (l. 727). Grendel is a kind of a human, or humanoid, and he goes on ‘weres wæstmum’ (‘in the shape of a man’), (l. 1352), but he’s much larger than a man: it takes four warriors simply to lift his head (l. 1637). He lives in a gloomy underwater lair somewhere beyond the ‘myrcan mor’ [‘dark moor’], (ll. 1402–41). He eats his victims and fights without weapons or armour (ll. 120–25, 730–44) [24].

Grendel was only the start of Beowulf’s monstrous fights. The Danes are attacked again (ll. 1279–99) by Grendel’s mother, looking for vengeance. Her appearance is similar to Grendel’s, except ‘idese onlicnes’ [‘in the likeness of a woman’], (l. 1351), but her attack differs from that of her son.

The final of the three monsters is a fire-breathing dragon (ll. 2550–2705). This is the most conventional of the

monsters Beowulf encounters and it's also the most challenging [24].

*wisse he gearwe  
þæt him holtwudu helpan ne meahte,  
lind wið lige. Sceolde lændaga  
æþeling ærgod ende gebidan,  
worulde lifes, ond se wyrm somod. (ll. 2339–43)*

*[he clearly understood  
that the forest-wood could not help him,  
the wooden shield against the flames. The foremost prince  
would have to endure the end of his transitory days,  
his life in the world, and the dragon with him.] [24].*

As we can conclude, this great poem of the unknown author has become the source of the inspiration for the writers and other creators of all the times, and provided the glory for the English literature.

## **2.2. Wisdom poetry**

In Old English there are a number of short poems related to the heroic tales in the Exeter Book which is described as "Wisdom poetry". They are lyrical in their description of life, some of the poems are gloomy in mood, one of them is "The Ruin", which tells of the decay of a once

glorious city of Roman Britain, and the second is “The Wanderer”, in which an older man talks about a slaughter in his youth, where his close friends were killed and the memories of this have remained with him all his life. “The Seafarer” is the story of a somber exile from home on the sea, from which the only hope of redemption is the joy of heaven. Other wisdom poems include “Wulf” and “Eadwacer”, “The Wife’s Lament”, and ‘The Husband’s Message’. King Alfred the Great wrote a wisdom poem based on the neoplatonic philosophy of Boethius called the “Lays of Boethius”.

King Alfred’s “Boethius” was preserved in two manuscripts, one of the tenth century written about fifty or sixty years after his death and is now in the British Museum, and the other dating from the beginning of the twelfth century, which was injured by the fire in 1740 and then lay neglected in a box during a century. Both manuscripts had the same prose preface, but the older manuscript contains a metrical proem. Besides these two manuscripts, a small fragment of a third was discovered at the Bodleian Library at Oxford by Professor Napier some years ago. It is probable that such a popular book as King Alfred’s Boethius was frequently copied [7].

## The Wonderer

### *An extract*

Oft him anhaga are gebideð,

metudes miltse, þeah þe he modcearig

geond lagulade longe sceolde

4 hreran mid hondum hrimcealde sæ

wadan wræclastas. Wyrð bið ful aræd!

Swa cwæð eardstapa, earfeþa gemyndig,

wraþra wælsleahta, winemæga hryre:

8 Oft ic sceolde ana uhtna gehwylce

mine ceare cwīþan. Nis nu cwicra nan

þe ic him modsefan minne durre

sweotule asecan. Ic to soþe wat

12 þæt biþ in eorle indryhten þeaw,

þæt he his ferðlocan fæste binde,

healde his hordcofan, hycge swa he wille.

Ne mæg werig mod wyrde wiðstandan,

16 ne se hreo hyge helpe gefremman.

Forðon domgeorne dreorigne oft

in hyra breostcofan bindað fæste;

swa ic modsefan minne sceolde,

20 oft earmcearig, eðle bidæled,

freomægum feor feterum sælan,

siþþan geara iu goldwine minne  
 hrusan heolstre biwrah, ond ic hean þonan  
 24 wod wintercearig ofer waþema gebind,  
 sohte seledreorig sinces bryttan,  
 hwær ic feor oþþe neah findan meahte  
 þone þe in meoduhealle mine wisse,  
 28 oþþe mec freondleasne frefran wolde,  
 wenian mid wynnum. Wat se þe cunnað  
 hu sliþen bið sorg to geferan  
 þam þe him lyt hafað leo fra geholena:  
 32 warað hine wræclast, nales wunden gold,  
 ferðloca freorig, nalæs foldan blæd.  
 Gemon he selessecgas ond sincþege,  
 hu hine on geoguðe his goldwine  
 36 wenede to wiste. Wyn eal gedreas!  
 Forþon wat se þe sceal his winedryhtnes  
 leofes larcwidum longe forþolian:  
 ðonne sorg ond slæð somod ætgædre  
 40 earmne anhogan oft gebindað.  
 þinceð him on mode þæt he his mondryhten  
 clyppe ond cysse, ond on cneo legge  
 honda ond heafod, swa he hwilum ær  
 44 in geardagum giefstolas breac.

Donne onwæcneð eft wineleas guma,  
 gesihð him biforan fealwe wegas,  
 baþian brimfuglas, brædan feþra,  
 48 hreosan hrim ond snaw hagle gemenged.

### Notes

line 1a: Welund is known in English folklore as Wayland the Smith. An Old Norse poem from the Edda, Völundarkviða, gives us a fuller account of his life.

line 7b: "Thaes ofereode, thisses swa mæg" means "It was overcome in respect of that, and so it might be in respect of this".

line 14a: Maethild (Matilda) wept, apparently, because she foretold she would drown in the river. Gauti (Geat) retorts that he will build a bridge over the river, but she notes that none can flee fate. Sure enough, she is drowned. Gauti calls for his harp, and, like a Germanic Orpheus, plays so well that his wife's body rises out of the waters. Gauti buries her properly and makes new strings for his harp from her hair.

line 18a: That Theodoric ruled the city of the Maerings for thirty years, landed in Geatland.

line 21b: Eormenricis much better known as a great king of the Ostrogoths, who died in about 375.

line 37b: Deor may be an authorial fiction. Heorrenda may be called as Horant in a thirteenth century German epic Kudrun, sang so sweetly that birds fell silent at his song, and fish and animals in the wood fell motionless [30].

### **Lays of Boethius**

*An extract*

By King Alfred the Great

Translated into modern English by Walter John Sedgefield Litt.D. (1900)

#### PRELUDE

Thus the old tale Alfred told us,  
West Saxons' king. He showed the cunning,  
The craft of songmen. Keenly he longed  
Unto the people to put forth songs  
To make men merry, manifold stories,  
Lest a weariness should ward away  
The man self-filled, that small heed takes  
Of such in his pride. Again I must speak,  
Take up my singing, the tale far known  
Weave for mortals; let who will listen.

## LAYS

### I

Tw'as long ago when the eastern Goths  
Sent from Scythia their swarms of shieldmen,  
With multitudes harried many a nation.  
Two tribes triumphant tramped to the south.  
The Goths in greatness grew year by year;  
Akin to the clansmen kings were there twain,  
Raedgod and Aleric; they ruled in power.  
Over Jove's mountain came many a Goth  
Gorged with glory, greedy to wrestle  
In fight with foemen. The banner flashing  
Fluttered on the staff. Freely the heroes  
All Italy over were eager to roam,  
The wielders of bucklers, bearing onward  
Even from Jove's mount on to ocean,  
Where in sea-streams Sicily lies,  
That mighty island, most famous of lands.  
Rudely the Roman rule was shattered;  
The shieldmen sacked the glorious city  
Rome was ravaged; Raedgod and Aleric  
Carried the fortress. Away fled the Caesar,  
Yes, and his princes, off to the Greeks.

The luckless left ones, losing the combat,  
To the Gothic foemen gave up all,  
Unwilling forfeited their fathers' treasures,  
Their holy allegiance hard was the loss!  
The hearts of the heroes held with the Greeks,  
If they dared follow the folk's foemen.  
Thus things stood the folk was stressed  
Many a winter, till Weird appointed  
That Theodoric the thanes and nobles  
Should lord it over. This leader of them  
Was claimed by Christ, the king himself  
Brought to baptism a blessed day  
For the sons of Rome. They sought right soon  
Help from the high one; he then vowed  
To give the Romans all rights olden,  
Safe to sojourn in their wealthy city,  
While God him granted the Goths' dominion  
To own and possess. All this the prince broke.  
Oath after oath; Arian error  
He loved better than the law of the Lord.  
The good Pope John he judged in his anger,  
Robbed of his head; a heinous deed!  
Countless wrongs were likewise wrought

By the Gothic leader on each of the good.  
In those days a leader in Rome was living,  
A high-born chieftain, cherishing his lord,  
While that the high-seat was held by the Greeks;  
A man most righteous. He was 'mid the Romans  
A giver of treasure glorious ever,  
Wise toward this world, wishful of honour,  
Learned in booklore; Boethius the name was  
That this hero had, that so highly was famed.  
Time after time he turned in his mind  
The evil and insult by alien princes  
Grievously given. To the Greeks he was true,  
Remembering the honours and ancient rights  
By his fathers aforetime fully enjoyed,  
Their love and kindness. Then with cunning  
He planned and brooded how he might bring  
The Greeks to his country, that once more the Caesar  
Might have full power over his people.  
Then to their former lords letters of embassy  
He sent in secret, summoning them by God,  
By their former faith, forthwith to him  
To speed Romewards; Greek senators  
Should rule the Romans, their rights render

Free to the folk. When he found this out,  
Theodoric the Amuling, the thane he had seized,  
Charging the braves that did his bidding  
To hold fast the hero; fierce was his heart,  
The chieftain dreading. Deep in a dungeon  
Bolted and barred he bade them cast him.  
Then was the man's mood mightily troubled,  
The mind of Boethius. Long had he borne  
High state worldly; the harder it was  
Bravely to bear this bitter fortune.  
Sad was the hero he hoped for no mercy,  
Locked in prison; past all comfort  
On the floor he fell with his face downwards,  
Woefully spread, his sorrow speaking,  
Hopeless utterly, ever thinking  
He should linger in fetters. He called on the Lord  
With cheerless voice, and thus he chanted [21].

Boeth. Book iii, metr. 2.

Hit lust to schewen be subtile song  
And be þe sown of delectable strenges  
How nature þat full myghti is and strong  
Attempereþ þe gouvernement of þinges,

This wyde worlde wiþ all his varienges  
So by here lawes kepeth and susteyneth  
And be bondes þat hauen no lowsynges  
Ful sykerly sche byndeþ and constreyneth.  
For þough þe leon of þat strange londe  
þat hight pene, þe faire chaynes were  
And takeþ mete be gifte of mannis hond  
And of þeire sturdy maistresse haueþ feere  
Of whom þei ofte stife strokes bere  
And softly . . . þei suffre to be bete  
Yit be þei ones lousid of þat gere,  
Theire olde corage will þei not foryete.

[xxxvii]

For if þe hote blode of any beste  
Theire foule mouthes haue made rede  
Theire hyhe corage þat long haþ ben of areste  
It will repayren vnto cruell hede.  
He casteþ þan his chaynes over hede,  
And roreth faste remembrynge as it were  
His maister ferst, of whom he was adrede,  
Wiþ bloody teeth þan will he al totere.  
The bryd þat syngeþ in þe bronche on hye  
If he be closyd in a cage of tree

And lusty folke hym seruen besily  
With metes þat full swete and lusty be,  
If he may ones skyp out and be fre  
His lusty mete he casteth vnder fote  
And to þe wode ful faste sekep he,  
And trollep with a wonnder lusty note.  
A yerde whiche þat growen is in lenthe  
With mannis hand ybowyd to þe grounde  
If þat þe hond remytteþ of his strenthe  
þe croppe ful sone will vp ayeen rebounde.  
And whan þe sonne is passid daies stounde,  
So vnder gone þe walkes of þe weste,  
Ful sone haþ a priue path yfounde,  
And in þe morne he ryseþ in þe est.  
And so þe day bygynneþ ayeen to sprynge,  
Thus euery thyng reioyep in his kynde,  
Theire olde recourse ayeinward forto brynge,  
And besily to torne & to wende.  
Be thise we schall conceyuen in oure mynde  
þat all thinges most hit þeire ordre swe,  
And þe begynnyng ioynen to þe end  
To knetten of hemself a cercle trewe.  
Book iv, prose 2.

Sith þat it is of kynde a man to meue  
 Will nocht his nature þt he schold go?  
 I seide, Yis, this in sothe as I byleue;  
 Than muste he, qd sche, kyndely forto do,  
 Meve hym vpon hys feet. Boecius. Hym muste so.  
 Thus on his feet may walken as hym oght.  
 This oper nay, forwhy he haþ hem nocht.  
 And on his hondes crepe he will therfore.  
 Who is of thise þe strengere wilt þou seyn?  
 Hold on, qd I, youre processe forthirmore;  
 No wyght may doute, of þis I am certeyn,  
 But þat þis man whiche haþ his lymes tweyn  
 Be stronger is þan he þat wanteth bothe;  
 He moste confessen þat will sey ysothe.  
 But þan þis verrey souereyn, qd sche,  
 To whiche þei hauen bothe effeccion,  
 The good & badde, & bothe þei stonden free,  
 To wynne it be þaire trewe eleccioun,  
 The good it wyneþ be perfeccioun  
 Of vertu, which is men kyndely  
 That souereyn good schulde be wonne by.  
 They bad it seken in a wrongfull wyse,  
 And for þat skill þei wynne it nocht a dele,

Be sondre lustes of þaire couetise  
Whiche ben no verrey menes naturele  
Whereby this good þei schuld acheuen wele.  
Whether is it þus, or elles demest þow  
To nayen this, wot I not why ne how.  
Of þat we haue concluded vs bytwene  
It is full clere & open to my sight.  
Þat good folk schulde alwey myghti bene,  
And bad men despoyled all of myght.  
Now þou be forme, qd sche, remeuest right,  
So þt of the I take a iugement  
As doth a leche be his pacient.  
When þat nature is reysed and redressed  
So þt it may wipstonde the maladie,  
He hopeth þan the langour is repressed,  
And þat he may be curid esily [7].

### **2.3. Classical and Latin poetry**

Several Old English poems are adaptations of late classical philosophical texts. The longest is a 10th century translation of Boethius' *Consolation of Philosophy* contained in the Cotton manuscript. Another is *The Phoenix* in the

Exeter Book. Other short poems derived from the Latin bestiary tradition such as “The Panther”, “The Whale” and “The Partridge”.

"The Phoenix falls into two basic portions: first, a description of the bird, its habitat, and its actions; second, an application of this information to various aspects of the Christian's life. There is no discernable change in diction or syntax between the two; these two halves deal simply with the phoenix as a bird and the with the phoenix as symbol. The second half of the poem functions as sort of exegesis or explanation of the first half of the work. For the first part of the poem, there is a source, the 'Carmen de ave phoenice' of Lactantius. ... The Old English poets' 'translation' of Lactantius is obviously close enough that there can be no doubt he used it as the source, but the Old English version tends to elaborate and repeat ideas so that the 170 lines of Latin become the first 380 lines of the 677-line Old English poem. The second half (lines 383-677) of The Phoenix is an interpretation of the material translated from Lactantius. For this portion of the poem, the question of a source becomes more vexed" [22].

The beginning of “The Phoenix” describes the Garden of Eden as a Paradise, meant only for believers, in “eastern

lands,” of sweet smells and means of extremes; the weather is mild: it never snows, rains, nor is the sun hot. There are no distinguishing geographical features whatsoever, like mountains, or valleys. However, the “plain,” as the poem refers to the Garden, is resplendent with blooming foliage that never dies. In this environment, there are no extreme emotions at all: no death, sickness, or misery, but on the flip side of that coin, readers get the sense that there are no extreme positive emotions either. Biblical events are occasionally referenced, including the flood, God’s creation of the world, and the Judgment at the end of time. There is also a recurrence of certain numbers, particularly the numbers three and twelve, which are also recurrent in Biblical literature. It is not until line 85 that the actual Phoenix bird is introduced, as a resident of “that forest,” and it seems to be primarily employed in watching the eternalness of the Garden. Its other activities include bathing, nest-making, singing, ruling over its fellow fowl as a prince, and perpetually growing old, dying, and then undergoing rebirth from its ashes, a glorious fiery death, which symbolizes giving of the self; and finally the resurrection from the ashes, symbolizing eternal life.

The second part of the poem becomes allegorical, where the bird symbolizes Christ's death and resurrection, his ability to return and raise the dead, and take the living followers on flight to the beautiful home (Paradise) of the phoenix. The phoenix also symbolizes the faithful followers through the baptismal altar where the sinful self dies and the new hope within Christ comes to life. There may be, as well, two more possible symbols of the bird, that the phoenix represents the Virgin Mary and the Catholic Church [21]. The poem has 677 lines.

## 2.4. Christian poetry

In Old English poetry there are those poems depicting biblical and saintly religious figures. The Vercelli Book contains a number of such poems, and one of the most beautiful is “Dream of the Rood”, in which the personified cross tells the story of the crucifixion. Christ appears as a young hero-king, while the cross itself feels all the physical pain of the crucifixion. The cross or the tree presents Jesus not as the suffering ‘man of sorrows’, but as a warlord who goes willingly to his death.

“Elene”, a poem contained in the same manuscript, offers an account of the Roman emperor Constantine’s victory over his rival Maximian at the Battle of the Milvian Bridge. Before the battle, Constantine has a vision that guarantees victory so long as he leads his men to war beneath the banner of Christ.

As biblical epics we may consider such poems as “Exodus” and “Daniel” telling about other individual religious figures. Two Old English poems glorify the life of St Guthlac, once a Mercian warrior, who then became a monk,

and then a hermit. With the help of St Bartholomew, and by retaining his faith in God despite the threats from demons, Guthlac succeeds in expelling the demons from this place and reclaiming it for human habitation. This is accomplished not by force, but by Guthlac's moral fortitude, which Bartholomew rewards.

The Old English poem "Andreas" the main character Andreas sees St Andrew and undertakes a perilous mission to free St Matthew and the other captives held in a city named Mermedonia, whose inhabitants are devil-worshipping cannibals. After a dangerous journey by sea, Andrew enters the city, whereupon he is seized and tortured. After enduring three days of this torment, Andrew summons a torrent of water, which threatens to drown everyone within the city walls. After the inhabitants of Mermedonia have freed Andrew, they were converted to Christianity. Andrew allows the flood to subside, and built a church to commemorate his victory over the Mermedonians.

***Modern English translation***

Full many a dire experience  
on that hill. I saw the God of hosts  
stretched grimly out. Darkness covered  
the Ruler's corpse with clouds, A shadow passed  
across his shining beauty, under the dark sky.  
All creation wept, bewailed  
the King's death. Christ was on the cross [25].

The Exeter Book contains a series of poems entitled  
“Christ”, consisted of three sections Christ A, B, C.

*(Unknown author) [27].*

Another debate poem is “Solomon and Saturn”, survived in some fragments, telling about the debates of Saturn portrayed as a magician with the wise king Solomon.

The Vercelli Book and Exeter Book contain four long narrative poems of saints' lives, or hagiography. In Vercelli there are about the saints Andreas and Elene and in Exeter the ones about Guthlac and Juliana.

The poem “Andreas” has 1,722 lines and is very close to “Beowulf” in style. It is the story of Saint Andrew and his journey to rescue Saint Matthew from the Mermedonians. Elene is the story of Saint Helena whodiscovered the True Cross. The cult of the True Cross was popular in Anglo-Saxon England.

The poem “Guthlac”consists of two parts about English Saint Guthlac (7th century). Guthlac (674–715) was a saint from the Anglo-Saxon kingdom of Mercia. He was a warrior, but after nine years of fighting for his kingdom, he converted to Christianity and became a hermit in Crowland, in Lincolnshire, where he lived in solitude on an island in the middle of a marsh. In the Old English period Guthlac was enormously popular, so two Old English poems were written about him in the Exeter Book, as well as the early Latin text about his life written by the East Anglian monk and

translated into Old English. Guthlac is also mentioned in the Anglo-Saxon Chronicle. And more over long after his death he was commemorated in the Guthlac Roll, a manuscript, made in the late 12th or early 13th century. It was very likely to be made for Crowland Abbey in Lincolnshire, which was built on the site of Guthlac's monastic cell. The Roll is unfortunately not preserved completely, having lost its first fifth.

ða he gesette    þurh his sylfes word.  
He fela findeð,    fea beoð gecorene.

[Guthlac A, B].

In the Old English poetry, not only men saints were commemorated but also women, who died for their faith. One of such a woman was described in the poem “Judith”, telling an account about Judith, an Israelite widow, who tries to save her besieged city. She tries to challenge the leader of the

attacking Assyrian army, an evil general named Holofernes. He does not succeed in raping Judith, as she severs his head, carrying it back to the walls of her city. The poem ends with Judith leading the Israelites to a battle in which the Assyrians are destroyed.

Another female figure is Juliana described in the homonymous poem “Juliana” by the author of “Elene” from the Exeter Book, undergoes religious persecution in the Roman Empire at the end of the 4th century. Juliana, a Christian, is martyred by the evil governor of the city of Nicomedia. She remains steadfast and unflinching in the face of certain death for her faith. Post-mortem, the place of her death is transformed into one of Christian community. The poem consists of 730 lines.

## 2.5. Biblical paraphrases

The Junius manuscript contains three paraphrases of Old Testament texts. Paraphrasing is some kind of poetical texts containing re-wordings of Biblical passages in Old English. They are “Genesis”, “Exodus” and “Daniel”. The

Nowell Codex contains a Biblical paraphrase called "Judith". The Psalter Psalms has 150 that have survived. There are a number of verse translations of the Gloria in Excelsis, the Lord's Prayer, the Apostles' Creed as well as a number of hymns and proverbs.

In addition to Biblical paraphrases are a number of original religious lyrical poems [15].

Ælfric's rhythmical prose is a predecessor to Old English poetry, and is linguistically different from the present-day tradition, which is based on a metrical system with two principal features, such as a regular pattern of stress and rhyme on the final word in a line. The most dominant system is the iambic pentameter with its rhyming schemes of the type AABB or ABAB. A iambic line consists of five feet, in which each foot consists of an unstressed syllable followed by a stressed syllable.

Old English poetry is very different from those of the modern tradition, based on two guiding principles: stress, as in modern poetry, and alliteration. The line consisted of two equal but partially independent parts. We talk of two half-lines forming one long line. Within each half-line there are exactly two fully stressed syllables and the number of unstressed syllables is relatively free. Alliteration consists of

the repetition of the initial sound in either two or three of the stressed syllables of the long line [Hogg, p.119].

Extract from the middle of “The Battle of Maldon”:

*1 Féoll ta to fórdan féalohilte swúrd:*

*fell then to ground yellow-hilted sword*

*2 ne míhte he g.ehéaldan héardne mec.e*

*not could he hold hard blade*

*3 wæ'pnes wéaldan. Ta g.yt tæt wórd g.ecwæ'e*

*weapon wield Then yet the word spoke*

*4 hár hilderinc hy'ssan by'lde*

*hoary battle-warrior warriors encouraged*

*5 bæ'd gángan fore góde g.eféran*

*urged go forward brave companions [Hogg, p.119-120].*

Essentially these types of lines consist of a pattern of fully stressed (/), partly stressed (i.e. with secondary stress) (\) and fully unstressed (x) syllables. The number of unstressed syllables is relatively unimportant. Here are the five types of half-line:

A / x / x

B x / x /

C x // x

D // \ x

E / \ x /

Usually alliteration is based on the first stressed syllable of the second half-line and the initial consonant of that syllable must alliterate with the stronger of the two stressed syllables in the first half-line. The other stressed syllable of the first half-line may, however, participate in the alliteration also.

The same, however, is not true of the second stressed syllable of the second half-line, which can only participate in alliteration in very special circumstances. There are exceptions to the above, but they are mostly a matter of literary style, and do not affect the fundamental linguistic points. The essential position is that only one single consonant is involved in the alliteration. But that leaves three cases to consider. Firstly, it is normally the case that if there is an initial consonant cluster, then alliteration still remains associated with only the initial consonant, as can be seen in another line from the same poem as before:

*bræ'd of tam beorne blódig.e gár*  
*dragged from the warrior bloody spear*

However, if the initial cluster is either sc-, sp- or st-, then that cluster alliterates only with itself, as can be seen in two further lines from the same poem:

*he sc. éaft ta mid eam sc.y'lde tat se sc. eaft tobæ'rst*

*he thrust then with the shield so the shaft broke  
and tæt spére sprengde tæt hit sprang ong.éan  
and the spear broke so that it sprang back [Hogg 122].*
